PREREQUISITES

Are there any required downloads for taskerCLI?

taskerCli requires that the Java virtual machine is installed on the computer.

What is required for taskerSVR?

taskerSVR runs on an apache server using a MySQL DBMS. To access the database requires a password and login.

INSTALLATION INSTRUCTIONS

TaskerCli

Move TaskerCli.jar to the desired location.

Set execute permissions using the desired method.

Optional: Create a shortcut or link to the desktop or start menu.

TaskerSvr

Open up the URL in your browser: taskerMAN/setup/setupdetails.php. Enter the connection details for your database into the boxes provided. Upon submission, the database will be created.

TaskerMan

Copy the folder "taskerMAN" into a desired location on your Apache server. Permission setting should be pre-configured, but in case any permission errors occur, using chmod with the value "700" on all PHP files will solve this.
